

EVENT QUEST

Overview

The Online Event Management System is a program that helps users easily book and manage events. It allows secure registration, checks venue availability, schedules appointments, and provides updates through notifications. Admins can oversee everything through a dashboard, making event planning simple and organized for everyone.

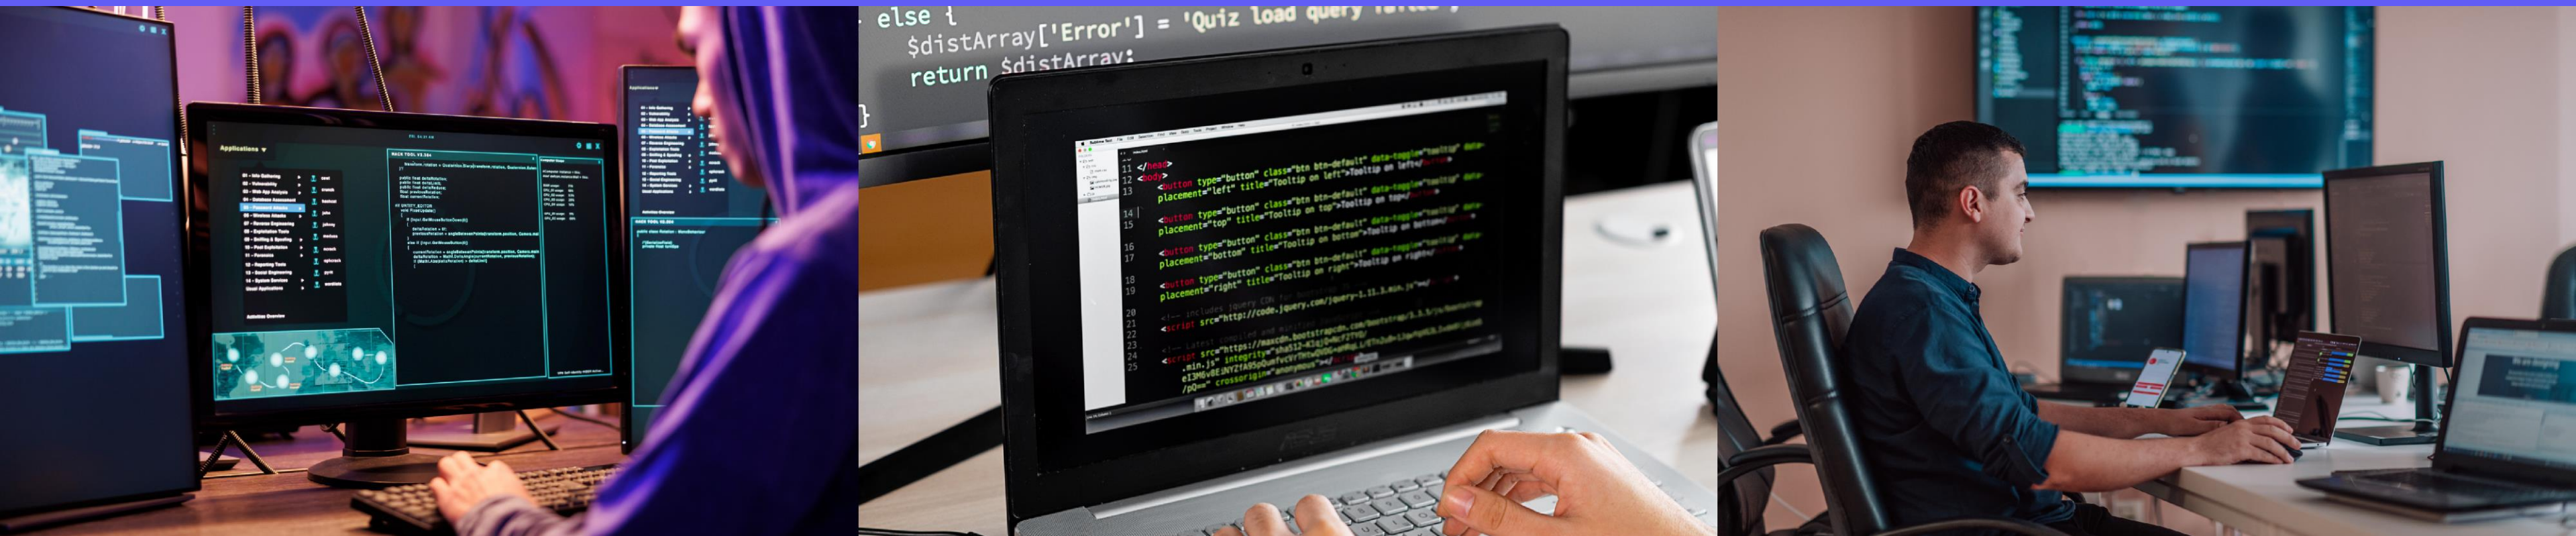

Project Features

- It allows users to **register and log in securely** and provides a simple interface to **schedule appointments or book events**.
- The system ensures smooth **hall availability management** by showing real-time updates on venue availability.
- Users can view and manage their **booking information**, with options to update or cancel their appointments easily.
- The **notification system** keeps everyone informed with reminders and updates. An **admin dashboard** offers powerful tools for administrators to oversee all bookings, manage events, and ensure everything runs smoothly.

Module 1

Set up a system where users can register and log in securely. Add email verification and password reset options to ensure account safety and easy access.

Login Page

Event management is a process of organizing a professional and focused event for a particular target audience. It involves visualizing concepts, planning, budgeting, and executing events such as fashion shows, musical concerts, corporate seminars, exhibitions, wedding celebrations, theme parties, product launches, etc.

Module 2

To Create a database to store hall availability details and design an easy-to-use interface for halls to update their schedules.
Build backend features to manage and update availability in real time.

Hall Booking

A screenshot of a web browser displaying a "Hall Booking Form". The browser's address bar shows the URL "127.0.0.1:8000/book_hall/". The form is titled "Hall Booking Form" and contains several input fields with labels and icons.

No halls available at this time.

* Availability is subject to change. Please check back closer to the booking date.

Module 3

Create a user-friendly interface for scheduling appointments, allowing users to choose a hall, select time slots, and provide booking details.
Link the interface to the backend to save and manage appointment information smoothly.

Conclusion

The Online Event Management System brings all aspects of event planning into one easy-to-use platform. From secure user registration and scheduling appointments to managing hall availability, bookings, and notifications, it simplifies the entire process. With a powerful admin dashboard, the system ensures smooth operations for administrators while providing users with a hassle-free experience. This project makes event management more efficient and organized for everyone involved.

Thank You
